

Safe driving is a lesson no one should have to learn the hard way.

Unsafe driving is a game of numbers, numbers like: 74%. That's how many auto-related fatality victims were not using safety restraints last year. Then there's 27%. That's the number that involved excessive speed, while 16% represents how many involved impairment from drugs, alcohol or fatigue, and 21% is the number of victims under 19 years old. When anyone takes risks behind the wheel, sooner or later the numbers catch up to them. Please encourage your students to drive carefully, because there is just no living with anything more than zero fatalities. For more information about safe driving visit ZeroFatalities.com.
